## Information for Workers at Grenada Stamping

Superfund Fact Sheet #4

September 2018

### Introduction

On December 29, 2017, a treatment system to reduce high levels of trichloroethene (TCE) inside the manufacturing building at Grenada Stamping was restarted under a U.S. Environmental Protection Agency removal action. Removal actions are short-term responses intended to protect people from risks or potential risks associated with contaminated sites. Sampling to date continues to show the system is effective at reducing TCE to below risk levels.

### June and July 2018 Sampling

Indoor air samples are being collected, using Radiello® samplers, at three locations over a specified duration. The three locations include two areas where workers among the sensitive population work (B6 and B9), and an area where workers among the non-sensitive population work (B3). The locations selected are where employees frequently work and where elevated concentrations of TCE were previously detected (before the treatment system was put in place).

Except for the June 2018 exceedance at one location (B-9), where an extraction pipe became separated and was repaired, results from sampling since the system was restarted have all been below the removal management levels (RMLs) for sensitive and non-sensitive populations. RMLs are used by EPA to help determine if any future actions may be needed. A sample result higher than a RML by itself does not imply that adverse health effects will occur. The data show that the system helps lower the indoor air concentrations inside the facility. The results from the most recent sampling is summarized on page 2.

### Worker Health

If you have health questions, you may want to consult your doctor. The Agency for Toxic Substances and Disease Registry (ATSDR) has TCE exposure information available for you and your doctors upon request. The materials explain how you can be exposed to TCE and how it may affect your health. For more information, contact:

Mississippi Poison Control Center: (601) 984-5577 or (800) 222-1222

Leann Bing, ATSDR: (404) 562-1784 or [KBing@cdc.gov](mailto:KBing@cdc.gov)

Occupational Safety and Health Administration: (601)965-4606 or [www.osha.gov/workers/file\\_complaint.html](http://www.osha.gov/workers/file_complaint.html)

Dr. Paul Byers, Mississippi State Department of Health: (601) 576-7725

## June and July 2018 Sampling (continued)

The results from the June and July 2018 samples are summarized below:

**Table 1: TCE Concentrations in Indoor Air - Manufacturing Building**

Sample Duration	Sampling Date	RML for Sensitive/ Non-Sensitive Populations	Concentrations Detected		
			B-3	B-6	B-9
28-days	6/26-7/24/2018	8.8/26ug/m3	2.02 ug/m3	0.99 ug/m3	0.67 ug/m3

EPA will continue to oversee the treatment system. The party operating the system is required to conduct periodic indoor air sampling and sampling of the system to ensure the system is performing properly, and that workers and the surrounding community are protected while the system operates.

EPA, in consultation with the Mississippi Department of Environmental Quality, proposed the Rockwell Grenada site to the Superfund National Priorities List (NPL) in January 2018 to comprehensively address contamination at the Grenada Stamping facility and in the surrounding community. More information can be found online at the websites listed below.
